SECRETARÍA GENERAL DE INFRAESTRUCTURAS

DIRECCIÓN GENERAL DE CARRETERAS

RESULTS OF THE FIRST ROUND OF THE STRATEGIC NOISE MAPS IN SPAIN AND ACTIONS DERIVED

Roads of the national network

Fernando Segués

Jesús Rubio Alférez

Edinburgh 27.10.09

THE NATIONAL ROAD NETWORK RED DE CARRETERAS DEL ESTADO

26.000 km

1st round: National Road Network

6.000 km = 4.800 km of free roads + 1200 toll highways Roads > 6 M vehicles per year

PROCEDURES AND ORGANISATION

213 UNITS (sections of roads) of maps were defined

UNITS were groupped into 20 main groups

20 studies were established (1 per group) to be carried out

20 public contracts were promoted

15 different consultant firms produced the 20 studies

The General Directorate of Roads established and implemented a procedure of external quality control

The whole process took almost 3 years

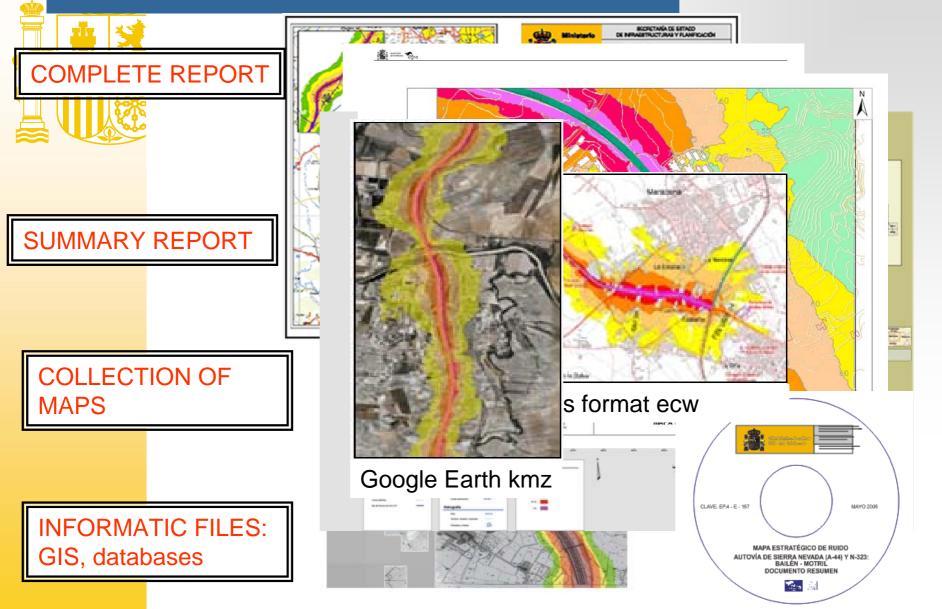

Cost: 4 millions of euros

STUDY	ROAD LONG. Km.	NUMBER OF UNITS	COST € (budget)	
Madrid-Toledo	71,82	1	50.000	
Bailén-Motril	206,54	4	130.000	
Jaén-Sevilla	291,15	3	175.000

First round of Strategic Noise Maps for the State - Owned Road Network

Summary of Results and Action Plan (SNAP) 2008 - 2012

The plan has focused on two aspects:

ACTION PLAN PAR 2008-2012

noise reduction at source (mainly pavements and traffic management)
reduction of noise transmission via the installation of noise barriers

NOISE BARRIERS

Noise Barrier Proposal.	N ^o of areas	Barrier length (km)	Cost (euros)
Priority A	222	179	108.337.200
Priority B	362	203	122.352.000
Complex actions (cover and others)	109	151	Not defined

ACTION PLAN PAR 2008-2012: FIRST ACTIONS IMPLEMENTED

NOISE BARRIERS

SOME CONCLUSSIONS FROM THE SPANISH EXPERIENCE

- Administrative and social interest on noise assessment and management has increased significantly due to SNM
- Since effort and resources involved have been extensive, we must be sure maps results are useful for the established goals
 Is this the tool we need for assessment and design of action plans?
- Some contradictions appear between an assessment for strategic purposes (general) and detailed technical requirements involved (i.e. definition of a quiet façade on a dwelling inside a building). Big numbers are necessary, but most actions have to be taken at a local level, new calculations are needed to define them

And for the 2 round?

- An improvement is needed in input data management, their availability, types and collection.
- A re-definition of the methodology of noise mapping is requiered in order to simplify acoustic calculation and to improve noise assessment (environmental impact).
- A pilot study for definition of updating maps procedures is being carried out (*We can not dedicate so much time and resources every 5 years*)
- Coordination between national and local administrations must be enhaced, as well as between roads and environmental administrations

The quality control team toasting at the successful end of the first round of noise mapping at a Rioja cellar

THANK YOU FOR YOUR ATTENTION
